

Digital-Literacy-Harshit

Project:- Digital Literacy

Author:- Harshit Singhal

Task 1 – Digital Literacy Awareness Infographic

In fulfilling this task, I have utilized Canva to create a one-page visual resource that aims to create awareness on digital literacy among my peers. The versatility of Canva, particularly in terms of educational design templates, has enabled me to create a professional-grade visual resource that effectively combines text and visual elements.

My design has focused on three fundamental pillars of digital literacy: defining digital literacy, internet safety, and professional presence on the internet. The design begins with an explanation of digital literacy, where I

have included a brief note on what digital literacy is, beyond merely knowing how to operate a computer, to being able to locate, evaluate, and communicate information through various digital platforms. The next section has utilized icons to emphasize various safety tips, such as using multi-factor authentication and avoiding phishing scams. The last section has included a checklist on how to maintain a professional presence on the internet, where I have focused on the importance of LinkedIn and maintaining appropriate social media settings.

The aspect of design that I found particularly interesting was the "CRAP" rule of graphic design, where "CRAP" stands for "Contrast, Repetition, Alignment, and Proximity." I found this to be a particularly interesting aspect of design, where I had to ensure that my design was "scan-able" for my target audience, ensuring that they could quickly grasp the importance of internet safety protocols.

Task 2 – Student Digital Portfolio

In order to create an initial professional online presence, I decided to create my profiles on GitHub, LinkedIn, and Kaggle. All these platforms play an important role in my professional life. GitHub is my repository where I will host my open-source projects, while LinkedIn is my professional networking site where I will connect with various experts in the field. Lastly, Kaggle is my platform where I will participate in various competitions related to data science.

In the next four years, I plan to utilize these platforms as my personal portfolio where I will showcase my growth as a developer. First, on GitHub, I will regularly update my Python and C++ assignments as well as my personal AI/ML projects to showcase my programming skills to potential employers. Secondly, on LinkedIn, I plan to utilize the platform as my personal gateway to various internship opportunities through various tech-related networks. Lastly, on Kaggle, I will utilize the platform to enhance my machine learning skills from basic to advanced levels. By creating these profiles during my college days, I will be able to transform from an amateur student to a professional with an online presence that reflects my passion for artificial intelligence. Here is a draft

project report for Task 3, covering both the coding practice and collaboration tool requirements within a 150- to 200-word range.

Task 3 – Coding and Collaboration Platforms

To accomplish this task, I utilized HackerRank for programming practice and Google Workspace for digital collaboration. I took the "Python Introduction" challenge on HackerRank, where I had to implement basic arithmetic and logical operations. This challenge allowed me to practice logical thinking and translate them into clean, executable codes. For the collaboration tool, I created a "Digital Literacy Awareness Quiz" consisting of five questions using Google Forms. This form contained multiple-choice questions on cybersecurity awareness and short-answer questions on digital tool preferences, where the answers will be analyzed using Google Sheets.

Both tools are essential tools for my academic progress. HackerRank enables me to fill the gap between theoretical knowledge and actual application, ensuring I am competitive in programming challenges and HackerRank competitions. Likewise, mastering Google Workspace enables me to participate actively in group projects with my batchmates. This is a critical skill in today's research and academic reporting, where collaboration is key to producing quality work. By utilizing these tools, I am building a strong foundation for competitive programming and collaborative scholarship. As a response to Task 4, here is a report entry focusing on a hypothetical yet common professional situation, keeping in mind the 100–150 word limit.

Task 4 – Professional Communication and Etiquette

Part(A) Professional Emails

enters on the mastery of professional correspondence in the context of two high-stakes academic and career-based scenarios. The first task entails writing a formal request to a professor for an assignment extension. The key in this task is being transparent by providing a valid reason without being too personal, as well as being proactive by setting a new deadline.

The next task entails writing an internship inquiry letter to a corporate coordinator. In this task, the key is being concise by stating skills and interest in the company, as well as being "action-oriented" by being respectful in tone. The drafts are assessed based on the clarity of the subject line, formal greetings, and formal closings, which prove that the power of concise communication lies in being well-organized rather than being long-winded in the explanation.

Part(b)(1) DO's and Don't

As a Student Digital Ambassador, I came up with this checklist to guide my batchmates on the gray areas between their personal and professional online life. While the "Do's" section is centered on building one's online reputation, it includes activities such as flaunting academic achievements and connecting with industry experts. On the other hand, the "Don'ts" section is based on the main mistakes to avoid, including venting online, which may cause identity theft. Having a clean digital footprint is as important as having a resume, and this checklist is meant to be a useful guide for the student to turn his/her online life into a force to be reckoned with.

Part(B)(2) poor digital communication

A common situation in which digital communication can cause a great problem is when a person commits a 'Reply All' mistake in a professional context. A hypothetical situation can be given in which a student sends a complaint regarding a course to a mailing list of a department instead of a trusted friend. This lack of digital etiquette can cause a student a bad reputation in academic circles and create unwanted tensions between teachers and students.

To avoid a similar situation in the future, a student should make sure he/she has correctly addressed the recipient before clicking 'Send.' Moreover, a student should abide by digital etiquette by practicing 'Pause Before Posting,' a principle in which a person should wait at least five minutes before clicking 'Send' when he/she is about to send a message in which he/she is upset. A student should also use a subject line and a formal tone in a message even when he/she is writing a message in a private context. Gemini said Here is a concise breakdown for your project report, keeping each part within the 100-word range as requested.

Task-5 Cybercrime Awareness Case Study & Prevention

Part A: Cyberbullying Case Study

Cyberbullying is a digital crime where a perpetrator harasses a victim through social platforms intentionally and repeatedly. This digital crime starts when a perpetrator stalks a victim's profile to obtain information. Next, they create "shadow" accounts to impersonate victims. After that, they share morphed images or rumors to socially isolate victims. This digital crime mainly affects college students, leading to mental and educational deterioration. For perpetrators, this digital crime leads to legal and professional consequences, such as a three-year jail sentence, as prescribed by the Bharatiya Nyaya Sanhita (BNS). They also face rustication from their educational institutions.

Part B: Prevention Checklist

To prevent digital crimes, college students must be "Security First" to stay safe digitally. This includes locking social media profiles, using Two-Factor Authentication, and never sharing OTPs. For financial safety, a UPI PIN is only to be used for sending money, not to receive money. Additionally, direct messages must be verified through a secondary channel before responding to them. Lastly, if a digital

crime is encountered, it must be immediately reported to the National Cyber Crime Portal at cybercrime.gov.in or dial 1930 to ensure legal action is initiated.
